

# Defect & Bug Report

Software Quality Assurance & Automated Testing Lab | Target: Booking.com

BUG REPORT

## 1 Defect Overview & Metadata

|                           |                                                                                 |
|---------------------------|---------------------------------------------------------------------------------|
| Bug ID                    | BUG-BKNG-2026-001                                                               |
| Defect Title              | Persistent Date-Picker Modal Overlay & Incomplete Search Query Execution        |
| Target Application        | <a href="https://www.booking.com">https://www.booking.com</a>                   |
| Component / Module        | Search Bar / Date-Picker Calendar Dropdown & Search Results Page                |
| Severity / Priority       | Severity: MediumPriority: High (P2)                                             |
| Test Automation Reference | features/search_hotel1.feature (Scenario Outline: Search hotels by destination) |

## 2 Test Environment

|                      |                                                            |
|----------------------|------------------------------------------------------------|
| Operating System     | Windows 11 (64-bit)                                        |
| Browser Tested       | Google Chrome (v120.0.6099+ / Headless & GUI Mode)         |
| Automation Framework | Python 3.10+, Selenium WebDriver 4.18+, Behave 1.2.6 (BDD) |

### 3 Steps to Reproduce

1. Navigate to <https://www.booking.com>.
2. In the **"Where are you going?"** destination input, type London and select the first autocomplete suggestion.
3. Click on the **"Check-in date — Check-out date"** field to expand the calendar popover.
4. Notice the calendar initially displays only the current and adjacent months (August & September 2026).
5. Without clicking the pagination chevron to open subsequent months, submit the search by clicking **"Search"**.
6. Observe the resulting Search Results page.

### 4 Observed Behavior vs. Expected Behavior

#### ✓ Expected Result

- The date-picker popover should automatically close upon form submission.
- Search results should be cleanly displayed with unobstructed access to property cards and filter options.

#### ✗ Actual Result (Defect)

- The search query executes without selected dates (showing generic "Select dates" CTAs).
- **The calendar modal remains permanently open** over the search results page, covering >50% of the viewport.

## 5 Visual Evidence & Automation Failure Log

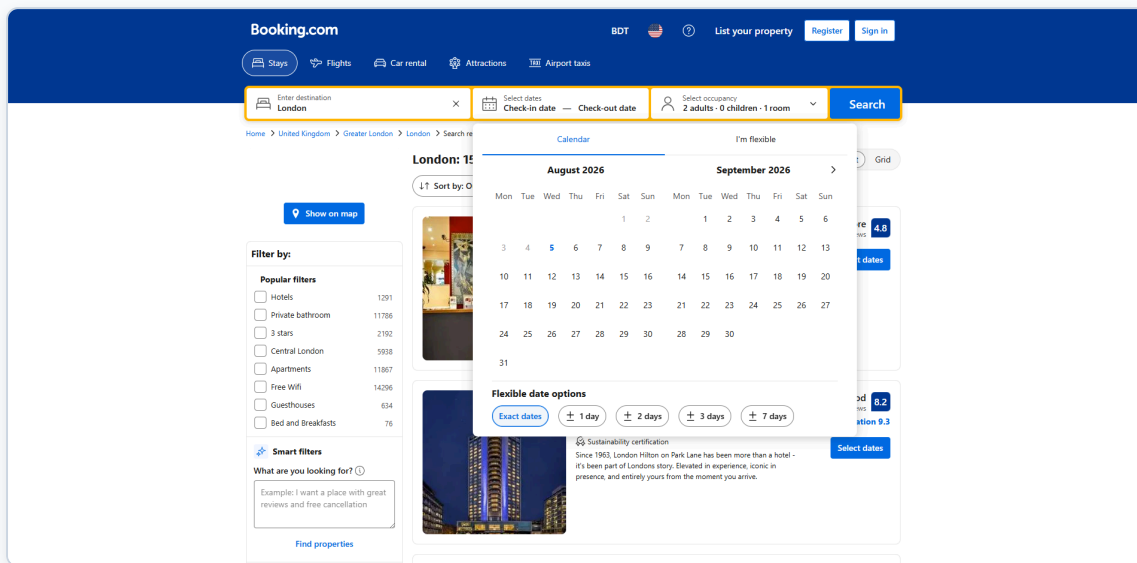

Figure 1: Persistent Date-Picker modal overlay obstructing hotel search results on Booking.com.

```
[INFO] [BookingAutomation]: Navigating to URL: https://www.booking.com
[INFO] [BookingAutomation]: Entering destination: 'London'
[INFO] [BookingAutomation]: Selecting dates: Check-in=2026-10-01, Check-out=2026-10-05
[INFO] [BookingAutomation]: Clicking Search button...
[ERROR] [BookingAutomation]: Step failed: 'the search results page should be displayed'
[INFO] [BookingAutomation]: Screenshot captured and saved to reports/screenshots/
```

## 6 Root Cause Analysis & Recommended Remediation

- **Popover Teardown on Submit:** Attach an event handler on the search form submission routine (onSubmit) to explicitly set the date-picker modal open state to false.
- **Backdrop & Outside-Click Handling:** Ensure outside clicks or viewport navigations force-close any active calendar dropdown overlays.
- **Auto-Pagination / Validation:** Automatically navigate the calendar view to future requested dates or prompt an inline validation toast if required dates are unselected.

7 Submitted By (Project Group Members)
